Please keep your proposed plan on cleaning up the east waterway, immigrants and refugee communities often don't understand complex environmental issues on pollution and will continue fishing in these water ways, these populations are vulnerable and don't have the resources for health care, they are also more likely to live in areas that have higher levels of air pollution and water pollution, these pollution level accumulate and often end up higher rates of cancer and chronic diseases please keep the most stringent regulation on pollution level, and remove as much sediment as possible. The life of immigrant communities of color need to be valued and protected
